

The role of flexible generation and maximising value through innovation

10th June 11.00am

This BHA Virtual Event explores the benefits of flexible generation and innovation through PPAs to maximise income.

The two speakers are Ian Kinnaird, Head of Hydro at the Drax Group and Dan Pargeter, Business Development Manager - Power at Limejump Ltd.

Ian and Dan will cover these two distinct areas of opportunity and respond to delegates questions.

Ian will discuss the changing energy market, the importance of energy storage, flexibility and stability through innovation to enable a route to net zero. He will discuss development activities on Cruachan 2, the challenge for the system operator and the steps being taken at Drax to provide these much-needed services from our hydro assets.

Dan will discuss how Limejump see hydropower generation developing over the next few years, with a focus on:

- How to maximise value through dynamic trading in the long and short term
- Fixed and flexible PPA products that empower generators to align with the, at times, unpredictable power prices
- Future innovations that could achieve higher returns.

Ian Kinnaird

Ian Kinnaird is Drax's Head of Hydro, managing a portfolio of hydro power stations and a fuel processing plant in Scotland. Ian also leads for Drax on Engineering Governance and compliance across all operational assets.

Daniel Pargeter

Daniel Pargeter is an expert in maximising the value of generation and hydro plant output. Having delivered PPA's and trading agreements to site owners, hedge funds, industrial and commercial businesses across multiple technologies, Daniel continues to drive the trading of power for distributed generation with value and innovation at the core.
